senior divisions for 84 days this year. The test began Oct. 30-31, 2017, with the next interim weight scheduled for Dec. 26, 2017. Final weights will be taken Jan. 22-23, 2018.

The bull test station team is student-run, with Rebecca Atkinson, associate professor of animal science, food and nutrition for beef cattle providing advisory oversight and hands-on training. The objective is to test the bulls' potential for producing superior calves that will grow fast and efficiently. To be eligible for the program, bulls must be registered with a recognized national breed association, come to the facility in good health and meet other criteria set by Atkinson and the station advisory board.

The student team will have the opportunity to learn to handle large livestock and assess animal health. Each bull is fitted with a magnetic collar that, when in close proximity to its assigned feed stall, unlocks the door. This helps the team ensure that each bull receives only its measured portion of grain. In addition, the student team will learn to conduct the ultrasonic tests and to conduct the scheduled weigh-ins.
