Portable Cattle Products

Lugging heavy working chutes might be a thing of the past, and cattle break into their own world of online dating.

Portable Q-Catch

Arrowquip introduced the newest portable chute system — Portable Q-Catch 86 Series Cattle Chute, Alley and Tub. It has been redesigned for ease of transportation and adheres to low-stress cattle handling guidelines.

Rubber floors ensure cattle have sure footing and eliminate noise as cattle enter the chute, and the cradle-shaped Easy Flow Adjustable Cattle Alley ensures cattle move in a single-file line. It can handle cattle and calves of any size. New jacks add to the ease of operation of the system. The new 3E BudFlow® ensures cattle enter and exit smoothly.

The entire system is available at Arrowquip Dealer locations across North America. For more information, visit www.arrowquip.com.

Tudder

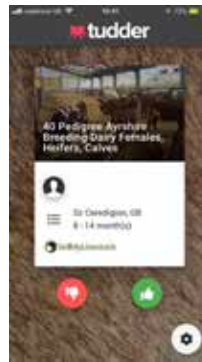

On Valentine's Day, SellMyLivestock launched the first-ever matchmaking app for farm animals. Tudder, similar to Tinder, is a swipe-based app helping farmers identify breeding stock and partners for their cattle.

Through Tudder, farmers can use their smartphones to swipe right for yes and left for no in search of the perfect match. Using the app, cattlemen indicate whether they're looking for breeding cows for their bulls, or vice versa.

The new app features real animals currently for sale on the site. Once a decision has been made, click the eye icon to be redirected to SellMyLivestock where users can view more pictures, info and contact the vendor to possibly purchase.

Tudder is available for download from the app store on both Apple and Android devices.

For more information, visit www.tudder.co.

Ravage Bale Processor

Elmer's Manufacturing announce the launch of its new product: the Ravage Bale Processor. The Ravage can spread and bunk round or square bales with specific adjustability to be flexible to all bale sizes and types. It was built off direct feedback from farmers who felt like the current offerings were not meeting their expectations.

Some key features of the Elmer's Ravage Bale Processor include:

- Can process two round or three square bales per load
- Live floor to provide ultimate control of bale
- Adjustable upper beater to help feed bale and adapt to different bale sizes
- Spring loaded bale discharge door to remove unneeded bales
- Directional chute for discharge control when spreading or bunking
- Adjustable/removable aggression bars to help restrict how quickly the bale feeds processor
- Industry leading bale and loading visibility to give the farmer full control of processing and loading the next bale.
