The bulls are weighed throughout the 120-day feeding period and ranked according to a formula based on weaning ratio, yearling ratio, ADG and WDA. All sale bulls will be sold with complete ultrasound carcass data and breeding soundness examinations. The purpose of the project is to provide a venue for Angus operations of all sizes and from all areas of the state to make improvements in their own herds by seeing how their bulls compare to others in the state. In addition, the program provides top-quality performance-tested bulls for prospective commercial and registered producers.
