## Heated insoles

ThermaCell Technologies has introduced heated insoles that are the only cordless, remote controlled, rechargeable heated insoles with a built-in thermostat, according to ThermaCell.

The remote control allows instant temperature adjustment with the touch of a button while insoles remain in footwear. Integrated rechargeable lithium-ion polymer batteries allow for more than 500 charges lasting up to five hours per charge.

The insoles can be used in all types of footwear and will last for multiple winters of heavy use. They come in five sizes: S, M, L, XL and XXL. Heated insoles can be adjusted to accommodate any shoe size from a woman's 6 to a man's 13.

The remote control is designed to hang from a belt or keychain, and is small enough to fit in a pocket. The remote can activate the insoles from a distance as far away as 7 ft. It activates and allows the user to select from two temperature settings, in addition to no heat.

For more information call 617-828-7667 or visit [www.thermacell.com](http://www.thermacell.com).

## Hay market entrance

Kubota Tractor Corp. has announced it will enter the U.S. hay market in 2014 with an all-new line of hay tools. Produced by Kverneland Group, which Kubota acquired in May 2012, the first phase of the new implements will include five disc mowers, ranging from 5 feet (ft.) 6 inches (in.) to 10 ft. 5 in.; a rotary rake and tedder, with a working width of 13 ft. 9 in. and 17 ft. 1 in., respectively; and pendulum spreaders, with capacities ranging from 7.8 ft. to 47.7 ft.

For more information visit the hay tools and spreaders product pages on [www.kubota.com](http://www.kubota.com).

Vermeer MC3300

## Mower conditioners with new style cutter bar

Vermeer has introduced a new mower conditioner line with three models available — the MC2800, MC3300 and MC3700 — all with a modular, shaft-driven Q3 cutter bar that helps make this line more fuel-efficient with minimal gear-to-gear interface, requiring less horsepower than gear-bed-style cutter bars. Practical innovations, including the Quick-Clip® Blade Retention System and Quick-Change™ Shear Ring, make the tasks of changing blades and repairing a sheared device quick and simple.

In addition to the unique cutter bar features, the new mower conditioners are equipped with a nitrogen-charged accumulator

suspension system to provide a consistent weight on the cutter bar throughout the full range of motion. Operators can easily customize suspension settings for their specific field conditions with a simple turn of a lever, resulting in less cutter-bar weight on the ground and less stress on the header and framework when compared to traditional mechanical spring systems.

With the option of either a steel roller or v-tine conditioner on all models, operators can choose the conditioning method preferred for their operation. In addition, multiple swath adjustments give users more control over their windrow formation. The line offers cutting widths of 9.1 ft. on the MC2800, 10.5 ft. on the MC3300, and 12 ft. on the MC3700.

## Inaugural catalog release

Henry Schein Animal Health (HSAH) has announced the launch of its first veterinary orthopedic instrument catalog. The comprehensive catalog includes an array of more than 3,000 high-quality, general and orthopedic-specific products from Veterinary Instrumentation; educational materials, and information about the latest technology solutions and value-added services designed to help practitioners operate the most efficient practices and provide high-quality care.

The 234-page catalog, available at [www.e-digitaleditions.com/i/171246](http://www.e-digitaleditions.com/i/171246), features in-depth product information on joint surgery, trauma implants and external fixation, as well as orthopedic, power and general instrumentation. In addition, practitioners can learn about the latest procedures through the catalog's special educational features, step-by-step procedure guides and case examples submitted by orthopedic surgeons from around the world. Practitioners will also find links in the catalog to online videos of various procedures.

The catalog includes information about the latest technology solutions and support offered through HSAH, including practice-management software solutions, such as Advantage+™, Avimark®, ImproMed™, McAllister™, Triple Crown® and Infinity™; and, inventory-management systems, such as Intelligent Inventory® with closed-loop ordering.

For those looking to expand the capacity of their practice, the catalog contains useful information about financial services such as credit-card processing; equipment, practice and patient financing; as well as equipment repair and office-design services. Information can also be found at [www.myvetdirect.com](http://www.myvetdirect.com), HSAH's online platform for veterinarians offering home delivery of products directly to clients.
