New external sensor

Onset has introduced the TMC6-HE air temperature sensor, the latest addition to the company's line of external sensors for energy and environmental monitoring.

Ideal for a range of energy-monitoring applications, from monitoring the efficiency of solar thermal systems to tracking building energy use, the sensor's copper-plated probe ensures high-accuracy measurements and faster response time than previous models, according to the release.

The sensor can be easily attached to water pipes, hot water storage tanks and boilers and is compatible with a number of the company's HOBO U12 USB data loggers.

The company offers Hoboware® software for plotting and analyzing temperature data that is compatible for PC and Mac users. The software provides a graphical user interface that enables users to graph, analyze and print data files, as well as export data to Excel and other spreadsheet programs.

Information on the new sensor, compatible data loggers and software is available at www.onsetcomp.com.

Organic listing

Alltech has announced that its application to the Organic Materials Review Institute (OMRI) for listing of Sel-Plex 2000 has been approved. With OMRI listing, the company's selenium supplement can be included in all organic feeding programs across the United States.

It is also Federal Drug Administration (FDA)-reviewed and is the first specific form of organic selenium (Se) to be European Union (EU)-approved for all species.

Selenium is an essential nutrient for both animals and people. It plays a critical role in metabolism, normal growth, reproductive health and immunity.

New tarp

Agri-Cover Inc. (ACI) has announced the release of the side-locking tarp system for semi-trailers, farm trucks and grain carts. The new tarp gives protection from the elements at a reasonable cost, and is handmade in the USA.

The company also carries replacement parts for any of its existing side-locking tarp systems.

For more information visit www.agricover.com or call 1-800-233-4655.

New partnership

Leica Geosystems Ag Solutions and Intuicom® have announced a new partnership that will allow farmers with a wide range of precision guidance equipment to connect to the Continuously Operating Reference System (CORS) networks that exist across the country.

The Intuicom Bridge™ allows farm equipment with guidance systems to access real-time RTK network connection without the use of a base station. Statewide CORS and private real-time networks are now available to farmers with a wide range of auto-steer systems.

Because CORS networks work together as a true network rather than a series of individual towers, farmers experience broader, more seamless coverage without the line-of-sight issues associated with existing, single-reference networks.

Leica Ag Solution's authorized resellers will become the premier distributor for the Intuicom RTK Bridge into the agriculture market.

For more information visit www.mojortk.com.

New twine and net wrap

Agco Parts has announced the availability of a new high-strength baler twine and net wrap designed exclusively for the company's hay equipment. The new offering, an addition to the company's existing line of twine products, provides its customers a wide variety of twine choices to meet the challenges of any baling environment.

To protect against light degradation all twine is treated with a UV inhibitor. The release says the new twine has higher knot strength and is designed specifically for extreme baling conditions that require increased grip to avoid slippage.

The company's professional-grade net wrap provides full side-to-side coverage, while the advanced net wrap delivers extra strength in the middle, ideal for baling rough crops such as cornstalks, according to the release.

The new line is available in the U.S. and Canada. For more information visit www.agcocorp.com.

New portable welder

Lincoln Electric has introduced the new Bulldog™ 140 portable welder/generator for homeowners, farmers, ranchers and small contractors who require welding and AC generator power in one portable unit.

The new product is designed exclusively for AC stick welding. It provides up to 140 amps of AC welding output for arc welding on steel, stainless steel, cast iron and hardfacing projects with up to 1/8-inch stick electrodes.

It also includes a single, full-range calibrated welding control to dial in the ideal amperage for each project. The dial includes operating ranges for 3/32-in. and 1/8-in. electrodes.

The unit delivers up to 16.7 amps continuous power from a 240V AC receptacle and up to 33.3 amps continuous power from a 120V AC duplex receptacle.

Its 5,500 watts surge (4,000 watts continuous) AC generator can power grinders, work lights, and pumps, and can be used for motor starting or standby emergency power. The unit has a 6.8-gal. fuel tank and a large fuel fill opening.

For more information call 1-888-355-3213 to request Bulletin E6.31 or visit www.lincolnelectric.com.
