**From Elberton, GA:** Take Hwy 77 South to Lexington GA turn left onto Hwy 78 east, then turn right onto Hwy 22 west, turn left onto Davids Rd.

**TERMS AND CONDITIONS OF SALE**

If you are unable to attend you may turn your bid in to Auctioneer, ringmen, or to Alan or Phillip. Bridges Angus will guarantee satisfaction on all orders. Terms of Sale are cash or check made payable to: Bridges Angus Farm, LLC. A Registration Certificate will be transferred and mailed to the buyer of each lot.

Each animal will be at purchasers own risk as soon as sold. Bulls will be fed and cared for free of charge for a reasonable amount of time until buyer is ready to receive bull.

Truckers believed to be reliable will be available to assist you in shipping your purchases.

Any and all adjustments that are made will result in sale credit (minus the salvage value of the animal) for the following year's sale.

All bulls sell satisfaction guaranteed.

Retained Interest – Bridges Angus Farm will be retaining 1/3 semen revenue interest on every bull sold in the sale. The buyer retains full possession and salvage of the animal. If in the future Bridges Angus Farm wishes to collect semen on any animal sold in the sale we will have the right to do so at the new owner's convenience and Bridges Angus Farm's expense. The new owner retains all other rights to the animal.

***Announcements made from the auction box will take precedence over information in the sale catalog.***

**Due to printing deadlines, performance and ultrasound data are not included in the catalog. However, there will be an update sheet with all of the bull test and ultrasound data available on sale day.**

### **A Little "Cow Sense" about caring for your new bull**

Remember, this bull is just a baby, a yearling—not a three or four year old bull. He still has a lot of growing to do. It is a good idea to continue to feed him until the breeding season starts. We recommend hay and 10 - 15 pounds of grain along with a protein supplement. After a breeding season of reasonable length, we recommend bringing him back in and feeding him the same as earlier to allow him to mature and grow; not just maintain. Most of these bulls will mature at four or five years of age weighing between 1600 and 2200 lbs depending on the care he gets after he leaves here. Your new bull is valuable, take care of him. If you do, he will be in better condition for the next breeding season. By taking these steps you will have a bull that you can be proud of and we will have a satisfied customer.

***Recommended number of cows per bull for a yearling bull (12-15 months of age) is 15-20 females.***

Dear Friends,

We hope you choose to be with us Saturday, October 31, 2009 for our Seventh Annual Performance Tested, Pedigree Proven Angus Bull Sale. The bulls will be penned and ready for viewing Friday, October 30, 2008 in the evening. All of the bulls offered are AI sired or a product of embryo transfer. Many half and full brothers will be available. This year in addition to the performance tested bulls we will be selling 25 outstanding commercial Angus heifers and 25 A.I. bred commercial Angus cows due between December and March.

Over the past year Angus breeders have had to deal with the discovery of two genetic defects, AM and NH. After much debate and discussion we have decided to include the bulls and heifers in this offering that are carriers for these defects. In a commercial situation the defects are easily managed and will not cause any problems. The bulls that are carriers offered in this bull sale carry our standard guarantee of one year from the date of purchase. In addition to our standard guarantee, any bull labeled AMC or NHC that produces a calf with either syndrome is guaranteed for life.

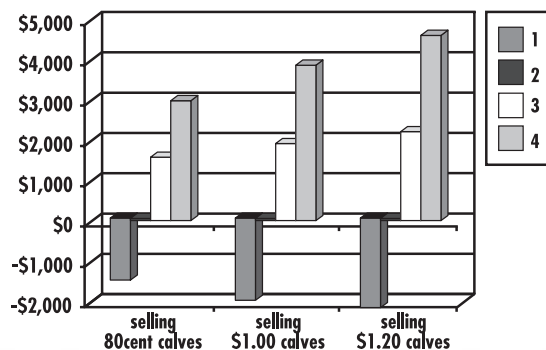

Many of these bulls rank in the upper percentiles of the breed for a given trait. Our bulls are designed to add rapid early growth providing you with more pounds at weaning and ultimately more dollars. Our bulls are bred for efficiency so that they and their calves convert less feed into more pounds and so your replacements will require less winter feed to maintain their body condition. Our bulls will sire fertile replacements with loads of maternal strength while improving ribeye area and marbling to every calf crop. Bridges' bulls will add profitability all in a moderate framed package.

For several years, we have offered marketing assistance to our bull customers that choose to use this service. Now more than ever as cattlemen and women we must capture every premium that we can in order to make a profit. We feel we are uniquely able to help you, our customers, capture more profits by using science and information. If this sounds appealing then feel free to ask us how we can help you get more money for your product. Our bulls and females sell 100% guaranteed, so you can buy with confidence and know that you are going to get the most for your hard earned dollar. Please feel free to visit any time and contact us if you have any questions.

Alan & Phillip

## What's A Bull Worth?

The graph indicates the possible differences in values of 4 bulls siring 125 calves in a lifetime. Bull #1 sires calves 15 pounds lighter at weaning. Bull #2 sires average calves. Bull #3 sires calves 15 pounds heavier at weaning. Bull #4 sires calves 30 pounds heavier at weaning. This graph only indicates the value considering weaning weights. The increase or decrease in value due to calving ease, the production of daughters, feed lot gain and efficiency, yearling growth, carcass traits, etc., could double or triple these differences.

## How much can you afford to pay for a top bull?

### COWMAN FORMULA

Increase in pounds per calf from a top-performance bull  
 X # of calves sired by him per year  
 X # of years to keep the bull  
 X Expected selling price of the calves  
 = Additional dollars you can pay for a better bull

\$1.20 per pounds

30lbs X 25 cows = 750 lbs X 4 years = 3000 lbs X \$1.20/lb = \$3600

This bull is worth \$3600 **more** than the average bull that will keep your weaning weights the same. Take this formula and put your own figures into it and see what you can afford to pay. This equation does not consider the increase in value due to calving ease, higher quality replacement heifers, yearling growth, feedlot gain, and improved carcass quality.

Example: A bull who will add 30 lbs. to the weaning weights of each of his calves mated to 25 cows per year for four years and you sell the calves for
