# UNIVERSITY OF GEORGIA EXTENSION

Welcome to the 50th Annual Calhoun Bull Evaluation Sale!

On behalf the GCA Bull Test Advisory Committee, UGA Beef Team and the Northwest Georgia Research and Education Center, we look forward to seeing you at the sale that Friday. It has been a real treat to see these bulls develop. They are an impressive group. Whether you are intently looking at pedigrees or simply looking to add performance, there are high quality bulls that will fit any need. If you need to bid by phone, please feel free to give us or Cannon Marketing a call.

On Thursday, Clint McWaters of Neogen will be discussing the role and benefits of genomic testing in seedstock selection and commercial production at the joint Red-Carpet, Floyd County Cattlemen's Association seminar. The meal will begin at 6:30 p.m.

See you then,

*Jason Duggin*

Extension Beef Specialist

**Seminar on genomics will begin at 6:30 p.m. on Thursday, December 5th. Everyone is invited!**

# General Information

The Calhoun Bull Evaluation is in its historic 50th year. This is an educational program for southeastern cattlemen and serves to provide a basis for comparison of their sires to those other producers. It is managed by the Animal & Dairy Science Department of The UGA CAES with the cooperation of the Georgia Cattlemen's Association.

## Directions to Livestock Pavilion

From Exit 312 off of I-75:

- Take Highway 53 West approx. 2 miles
- Turn right on McDaniel Station Road
- Continue on to stop sign
- Turn left on to Highway 53 Spur, SW
- Go approx. 200 yards, the Livestock Pavilion is on the left.

**GPS Address: 1286 Highway 53 Spur, SW  
Calhoun, GA 30701**

## Announcements

**Announcements made from the auction box on sale day take precedence over the printed material in this catalog and all other announcements.**

## Sale Order

Sale will begin at 12:30 p.m. The order of sale is determined by the index. The highest indexing bull sells first and is followed in descending order, regardless of breed.

**Index = Average Daily Gain (ADG) during test + Weight per Day of Age (WDA) at end of test.**

## Eligibility for Sale

- All bulls must be genomic tested with parent verification.
- Bulls were in approximately the top 2/3 on a combination of rate of gain (ADG) and weight per day of age (WDA) in each breed.
- Unruly or unsound bulls will not be sold.
- Minimum yearling scrotal of 30 cm.
- Must pass a Breeding Soundness Exam.
- Free of the following known genetic defects: AM, NH, CA, DD, OS, & Dwarfism. The

potential or carrier status of all bulls for newly identified genetic defects not listed above is disclosed to buyer in this sale catalog.

## Terms and Conditions

- Each bull sells to the highest bidder.
- The auctioneer settles any dispute as to bids.
- The terms of the sale are cash or check.
- Each bull becomes the risk of the new owner as soon as sold in the auction ring. However, the staff takes every safety precaution until all cattle are loaded.
- Staff employees tend to bulls for a period of 24 hours after the sale.
- Buyers will receive a properly transferred certificate of registry at the consignor's expense. Buyers that have not received certificates within 90 days of the sale should contact sale management.
- Health certificates will be available on each bull sold. Buyers from states with special entry requirements should call 706-728-4354.

**All persons who attend this sale do so at their own risk. The owners and sponsors assume no liability, legal or otherwise, for accidents of any nature.**

## Bull Development

### Test Data Collection

All bulls were received on July 1st or 2nd, 2019. After a 21-day diet transition period, weights were taken at 0, 28, 56, 84, and 112 days. Hip heights were recorded at days 0 and 112.

### Health & Fertility

Health is excellent. Bulls have been examined thoroughly for physical soundness, and have passed a breeding soundness exam by a licensed veterinarian.

### Ration and Care

Continue developing yearling bulls with quality forages, hay, and supplemental feed. This will help ensure proper growth and performance. The feed ration formulation used in this program is available online at [ugabeef.com](http://ugabeef.com)

# Explanation of Gain Test Data

## Performance Records

Each bull selling has passed strict performance standards, and has a complete record of genotypically enhance EPDs, which is listed below the two-generation pedigree.

## Ultrasound Measurements

Bulls were scanned according to the Centralized Ultrasound Processing (CUP) Lab procedures and interpretations. REA, IMF, and fat adjustments were made to 365 days of age.

# How Does Genomic Testing Impact the Beef Industry?

**By Dr. Daniela Lourenco, Assistant Professor in Animal Breeding and Genetics at UGA in the Department of Animal and Dairy Science. Dr. Lourenco has been involved with the implementation of the single-step genomic evaluation for several American and Canadian beef cattle breed associations.**

In the early 1980s, geneticists described the possible uses of DNA-based technology in livestock breeding as a way of constructing more precise genetic relationships to be used in genetic evaluation programs. However, at that time, genomically testing animals was impossible because of a lack of resources and extremely high costs. As you can see, genomic testing is not necessarily a new idea in the eyes of science, but its application in today's beef industry was put on hold until the technology evolved to a point where it became affordable for breeders. But how does this technology really work and what are the benefits of using it?

Let's start from the beginning. When a bull has no progeny or just its own performance records, its EPD is an average of the parents EPD. In such a case, it is impossible to distinguish which bull is the best within a group of siblings, unless we wait until performance is recorded for those bulls. Additionally, when EPDs are based solely on parent average, their accuracy is rather low. Genomic testing came to help us identify the best bulls beforehand with a greater confidence! Even if a bull has no performance yet, the average of its parents EPD can be combined with the output of genomic testing to better identify the best bulls earlier in life. In this way, genomically testing bulls is like taking a snapshot of their genetic material to investigate their differences. Not surprisingly, each bull has its own genomic fingerprint!

This genomic fingerprint is just an extra piece of information that we can use to tell how well a bull is going to perform before we observe the performance. It is well known in our field that the more information we use to calculate an EPD, the more accurate it is. Therefore, there is no magic here! Genomically testing bulls boosts EPD accuracy because it adds more information to the genetic evaluation system. It is just like adding information on progeny performance! The equivalence between the information the genomic testing is adding and the number of progeny depends on the trait. Do not forget that this boost in accuracy is observed only for the bulls that are genotyped. Does a bull still benefit from genomic testing with individual records and progeny records already being recorded? The answer is yes! Genomic testing has room to improve accuracy until its maximum value of 0.99. What if a bull already has an EPD accuracy of 0.99? If this is the case, the output of his genomic test can still give information to his genomic tested progeny.

One may ask, if genomically testing young bulls without performance information is equivalent to adding performance records, do we still need to performance test those animals? Well, having genomic information without collecting phenotypes (weights, etc.) later is like having a credit card and no money to pay the bill at the end of the month. The benefit will be available only once! This means that the genomic test does function by itself but can be a very powerful tool if used in a genetic evaluation system that already collects performance records and pedigree information on bulls and its relatives.

Genomically testing bulls is the new standard in genetic evaluation programs and the use of this technology helps breeders to advance their businesses.
