Selling

75 ANGUS BULLS & 10 ANGUS FEMALES

Welcome!

FELLOW CATTLEMEN -

This year's sale has a variety of promising herd sire prospects and females to build a herd around. We appreciate you taking the time to evaluate our cattle. We strive to have cattle that can do it all; calving ease, growth, maternal stayability, soundness and end product merit. This is an exceptional, well rounded group of bulls.

2019 was an interesting year. While there was excess moisture and flooding, at the same time, we were blessed with ample grass, hay, and an abundant harvest. Cattle were able to thrive with the cooler temperatures we had last summer. 2020 looks to be promising in the Ag sector with new trade deals that should build higher demand for our products.

Our summer was full of baseball and bucket calves. I enjoyed coaching Byron's 8U team. Even having a broken arm didn't slow him down. He even batted well with one hand. It was fun to watch both Colin and Byron improve and finish off their summer on a team together winning 1st place at the Glasgow Tournament and 3rd place in the Show-Me State Games. This was Colin's first year as a full 4-H member. He did extremely well, winning Grand Champion Bucket Calf and the Showmanship Award. Byron also did well showing his bucket calf in the Clover Kids category.

This past October was particularly rough as we lost one of the most influential people in my life, my grandpa, Ray Henke. However, we were blessed to spend many days and Sunday dinners with him. He lived a full life! Even at the age of 91, he was sharp as ever and brought joy to anyone who crossed his path.

Thank you to our hired man, Kyle Hinkle, for your hard work and dedication and to all of the people who come and help us throughout the year. 2020 will have more excitement for our family, as we will welcome our fourth child in August. Hopefully this one will be able to keep up with three big brothers! They are all excited for the addition. We are truly blessed.

Thank you to all our past customers. We truly believe the best part of the cattle business is the people. We look forward to working with you again, as well as new customers. We can't wait to see everyone again on March 12th!

Sincerely, Charles Henke

IN LOVING MEMORY OF RAY HENKE

Cattle will sell live in the ring.

GUARANTEE

First breeding season guarantee will convey with each purchase. A season is defined as the first 90 days the bull is first turned out. Replacements will be granted if available or credit will be given minus salvage value of the bull if a bull proves to not be a satisfactory breeder. Notify us as soon as possible and before salvaging your bull. This is not mortality insurance and do not guarantee against neglect. Your purchase is a major investment in your cowherd, mortality insurance will be available sale day.

Join us for supper after the sale!

TERMS AND CONDITIONS

Henke Farms assume no liability in case of an accident and cattle will sell under terms and conditions offered by the American Angus Association.

TRUCKING AND BOARDING

Bulls picked up sale day receive \$50 off. Free boarding until April 1, 2020. A \$3/day fee will be assessed after April 1st.

INCIDENCE OF CALVING DIFFICULTY

While we understand the need for heifer bulls (our recommendation is 7 CED and around 2 or lower on BW) we also think that the Calving Ease Direct EPD may be misunderstood. This graph shows that from an 18 CED Sire compared to an 0 CED Sire there is only a 6% increase of assisted births in first calf heifers. The bottom line is CED EPD is for bulls going on heifers, selecting high CED bulls for cow's could generate undesirably low birthweights and conversely make smaller pelvic areas in their progeny.

Angus is a Leading Breed for Calving Ease

Progeny of 20 highest accuracy sires born since 1995 for each unit of CE EPD

The incidence of calving difficulty in Angus cattle is very low. While these data reflect some corrective matings, a very high percentage of calves born to Angus heifers, sired by Angus bulls with breed average or greater CE EPDs, are born unassisted.

ANGUS
THE BUSINESS BREED

SELLING 75 ANGUS BULLS & 10 ELITE ANGUS FEMALES!

THURSDAY, MARCH 12, 2020 - 6:00 PM CST

LOT 1

We think that the lead off position belongs to a balanced trait eye appealing bull suitable for the majority of our customers. This Southern Charm son is long, muscular, sound, and attractive. Great for growth, scrotal, docility and carcass. A big 17 in ribeye is easy to see in person on this big stout bull. His moderate birth and Show Me Select qualifying CED EPD adds to this bulls all around ability. His dam has 2 BW@94 and 2 WW@104 and 2YW@105.

LOT 2

There are several new EPDs and Index's offered by American Angus. One deals with feet shape and an index for Maternal ability. This bull excels for both ranking in the top 1% for foot angle and top 3% for \$Maternal index. The best part is this is a big carcass value bull and thus is the third highest \$Combination bull in our sale as he couples both maternal and terminal very well. Comes from an impressive dam who has 9 WW@106 and 7 YW@105 in a 368 day calving interval. He is as sound as can be.

TOP 1% ANGLE EPD and 333 \$C!

The highest scrotal bull of the Southern Charm sire group. The sire is appreciated for the marbling, scrotal and power he injects. This bulls impressive 10.28% IMF on top of a 16.5 in ribeye is very hard to find. You may look forever and not find this many 10% IMF bulls. This bull could take carcass to the next level with the correct composure and look. Out of a first calf heifer. He is one of the thickest bulls in the sale.

Backed up by a powerful cow who has 4 WW@110 and 1 YW@116 in a 354 day calving interval who produced a \$4,000 bull in our first auction. Moderate on birth and ideal for growth. This is the highest MB EPD son of the IMF boosting Southern Charm. This guy like his brothers has over a 10% IMF and still a 14.8 in ribeye. This is real carcass quality in a world paid more on quality every day. Safe to use on heifers. His Dam is going to the donor pen this spring!

This is a top 1% WW EPD bull who combines maternal and terminal traits well. A 10% IMF bull is incredibly hard to find with .36 rib fat. Out of an excellent first calf heifer. Should work on large heifers. Dam was the best one of the flush.

Great growth bull by our most prolific donor ever who produced 8 bulls in our 2019 sale to average \$4,637. Should be a foot improver ranking in the top 5% for Claw and Angle EPD. Our bulls bed and feed on concrete and we are able to access foot quality very easily each day. In 2018 her three sons averaged \$8,000. She produced 3 BW@97, 3 WW@106, 3 YW@108. Flush brother to lots 81 and 82.

The calving ease king of the sale and still ranks in the top 3% for growth. This ET bull excels for maternal strength and still scans a 15.4 in rib eye. This is a unique bull for his calving ease, growth and eye appeal. Very likely one of the top bulls of the sale as he specializes greatly in the three most important traits in the industry. Easy calving, fast growth and reproduction. His dam sold privately to one of the good cattle analyzers in the breed, Myers Angus and Riverbend Farm in KY. This bull is smooth made and hard to fault. This is one of the thickest bulls in the sale.

The number 2 highest \$Maternal index bull in the sale. Safe for heifers, big on growth and maternal. One of the high \$Combination bulls of the sale. Dam has 2 BW@93, 2 WW@108 and 1 YW@102. Check out his big scan data.

LOT 40

LOTS 40-44

This group of half brothers by Werner Flat Top are all safe for heifers. They are all around good bulls hard to pick holes in. If you are looking for good growth without getting too terrible big for mature size and weight this is a good group.

You will find that this Blackhawk sire group is big framed, long bodied, and easy fleshing. This set of bulls are very eye appealing and super docile. This guy is one of the highest calving ease bulls in the offering and will be easy to pick sale day. All Blackhawks are slick haired to work well on fescue.

This big weaning weight bull comes from a dam with 2 WW@112 and 1 YW@104 in a 372 day calving interval.

LOT 61

LOTS 61-65

We used the sire Capitalist 316 for a distinct purpose of producing some great replacement females. If your looking to produce your own heifers this is the sire group for you. The females out of "316" are the best young females in our herd. A bit more tempered for growth if your looking to not increase mature size and weight. All these bulls except for 65 could be used on heifers. 65 is a large framed son of 316.

This was a great scanning bull and offers all around trait optimization. The sire Hickok has become the go to bull for big commercial breeding projects and prove to be consistently good cattle. This bull is safe for heifers. Should be an excellent bull for replacement females.

A flawless heifer on paper with awesome Maternal indicators. In person she is deep and fleshy in the right frame for any breeder. Her dam posts 2 BW@97 2 WW@108 and 1 YW@103 in a 370 day calving interval. She is a grand daughter of our most influential donor who has impacted our sale and herd greatly. Dam will likely make Pathfinder this year as well as be in the donor pen. We wanted to offer one of our best for the sale!

ADJUSTED RIB FAT IN INCHES

PERCENTILE RANK. Rank of that EPD compared to the non parent Angus bulls in the breed. Example: 2% for WW means that animal is in the top 2% of the breed for WW EPD.

DNA TRAITS. DNA score shown as a percentile rank as to how the animal ranks in the Angus breed. Lowered is considered better. Example: 1% would mean the best 1% of the breed.

RATIOS. How the animal compares to the others the same age raised in the same environment. 100 is the average, anything over or under is a percentage. 104 ratio means 4% better than average. 99 means 1% lower than average.

American Angus Association \$Value Indexes

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

ANGUS
THE BUSINESS BREED

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase weaning and maternal milk traits while also continuing to increase mature cow size.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

American Angus Association Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

FOOT SCORE

Claw Set (Claw), is expressed in units of claw-set score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal claw set, which is toes that are symmetrical, even and appropriately spaced.

Foot Angle (Angle), is expressed in units of foot-angle score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal foot angle, which is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass traits where the units of measure are in trait format and analyzed on an age-constant basis.

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. Increased selection pressure on \$W increases weaning and maternal milk traits while increasing mature cow size.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals. Components for computing \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase, and market these animals on a quality-based carcass grid.
