HERD HEALTH:

All cattle will be accompanied by proper health certificates for immediate shipment. All bulls will be fertility tested and will be considered sound breeders.

TRUCKING:

Cattle may be loaded following the sale, but can remain at the sale site until trucking or pick up can be arranged. Truckers believed to be reliable will be available to assist you in shipping your purchases.

TERMS & CONDITIONS:

All cattle sell under the terms and conditions as recommended by the American Angus Association with these exceptions: All supplements to the sale or announcements from the block take precedence over what is written in the sale book.

LIABILITY:

All persons attending the sale and related functions do so at their own risk. WCAAA and the other sale consignees, along with the sale management and staff, assume no liability, legal or otherwise for any accidents or injuries that may occur.

SALE SETTLEMENT:

All cattle are to be settled for prior to load out unless prior arrangements have been made. Terms are cash.

Welcome

P O Box 242
Charleston, AR 72933

On behalf of all West Central Arkansas Angus Association Members, I would like to welcome you to our Third Annual Genetic Showcase "Volume III."

As you analyze our sale offering, I believe you will agree that there are great opportunities to acquire some of the elite and cutting-edge Angus genetics available today. There is a variety in the offering that will range from embryo packages to 3-in-1 pairs.

The members of WCAAA take pride in the quality of their cattle, and their hard work, integrity and dedication show in this offering today.

With our most sincere thanks,
Tim O'Neal, President WCAAA

Consigned by Primus Genetics, Millers Creek, NC
 Kem 6201 is sired by the growth and carcass leader SS Objective and descends from the famous Kem of Woodlawn family.
 Kem 6201 ranks in the top 3% of non-parent females for WW, 1% YW, 3% Milk, 10% IMF, 3% UREA and 1% \$B.
 Kem 823, the dam of this outstanding future donor, is a featured donor in the Primus Genetics program and was selected by Leonard Fussell in the historic Woodlawn Dispersion in Illinois where the Kem Family generated more than \$250,000 in sales.
 Kem 119, the grandam of this outstanding feature, was the \$55,000 selection of Whitestone Farm in Virginia in the Woodlawn Dispersion and posts individual ratios of WW 118, YW 111, 153 IMF and 116 for REA.
 Bred to Nichols Extra K205. Examined safe.

E-mail: Slatangus1@aol.com · www.slatteryseedstock.com

Welcome to Volume III of the West Central Arkansas Angus Association "Genetic Showcase."

The dedicated officers and members of this organization have assembled the strongest offering to date. This year's sale will feature proven donors, powerful bred and open heifers, show heifer prospects, productive pairs, elite pregnancies and embryo packages.

The commitment of this progressive group of breeders is evident as you look through this offering and see the breed-leading genetics that is being offered with numbers that rank in the very top of the breed.

All of the consignors have dug deep into the heart of their herds to make this offering available to you.

Please join us sale day and take advantage of the commitment and hard work the members of the West Central Arkansas Angus Association have put forth to bring you this exciting offering.

If you are not a member of the WCAAA please make it a point to join while you are at the sale. This is a great group of Angus breeders and Angus enthusiasts and they are committed to improving and promoting the Angus breed in the great state of Arkansas.

We look forward to seeing you sale day and do not hesitate to call if we can be of any help.

American Angus Association Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Growth

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which an sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Carcass

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

Maternal

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Ultrasound

Intramuscular fat EPD (%IMF), is a predictor of the difference in a sire's progeny for percent intramuscular fat in the ribeye muscle compared to other sires.

Ribeye Area EPD (RE), is a predictor of the difference in square inches of ultrasound ribeye area of a sire's progeny compared to the progeny of other sires.

Fat Thickness EPD (FAT), expressed in inches, is a predictor of the difference in ultrasound fat thickness at the 12th rib of a sire's progeny compared to the progeny of other sires. It includes the weighted average of 60% of the rib fat measurement and 40% of the rump fat measurement.

\$Value Indexes

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Quality Grade (\$QG) \$QG represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place more emphasis on improving quality grade. The carcass marbling (Marb) EPD and ultrasound-derived percent intramuscular fat (%IMF) EPD contribute to \$QG.

Yield Grade (\$YG) \$YG represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

\$G combines both \$QG and \$YG, and may be the best carcass decision tool for focusing on quality and red meat yield simultaneously.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

Directions to Sale

From Interstate 40:

Take Ozark exit (exit 35). Turn SOUTH onto Highway 23, go through Ozark to first stoplight. Turn LEFT, continue on 23 to next stoplight, turn RIGHT, (still on 23 south), continue 14 miles, turn LEFT on Highway 22, 0.7 miles to Jubilee Farms on Right.

From Fort Smith:

From I-540, take Rogers Ave. (EAST) exit, go EAST on Rogers Avenue (Highway 22) appx. 35 miles to Caulksville to Jubilee Farms.

Signs will be posted near farm.

Ample parking areas will be provided for those with automobiles and trailers.

Consignors:

Consignor.....	Lots
Diamond W Farm, Charleston, AR.....	15, 43, 66
Ford, David, Sallisaw, OK	7, 14, 30, 61
