## 20<sup>th</sup> Performance Bull Sale • February 20, 2010

Announcements made on sale day will take precedence over information in the sale book.

**Cattle will be available for inspection Friday afternoon, February 19, or any time prior to the sale by appointment.**

### SALE ORDER:

Cattle will sell in the same order as listed in this sale book. Full brothers may enter the ring in groups of two.

### SALE DAY PHONES:

**(803) 685-5048 • Cell: (803) 622-8597  
Cell: (803) 622-4140 • Cell: (864) 993-5145**

**Sale begins at Noon (EST)**

**Complimentary lunch beginning at 11 a.m.**

**SNOW/ICE DATE - Monday, February 22, 2010  
Call for confirmation!**

**AUCTIONEER:** Col. Mike Jones  
West Pointe, GA (706) 884-6592

### ACCOMMODATIONS:

Are available at I-20, Exit 22, Hwy. 1, Aiken, SC  
Quality Inn (803) 502-0900 or Days Inn (803) 642-5692

### DIRECTIONS:

The physical address is: 318 Aiken Road or 318 State Hwy. 392, Ridge Spring, SC 29129

**From Augusta, GA** - take I-20 east. Exit 22 - Turn left on Hwy. 1 toward Ridge Spring. Proceed 10 miles to Hwy. 392 and turn left. The farm is 3 miles on the left.

**From Columbia, SC** - take I-20 west. Exit 33 - Turn right on Hwy. 39 to Ridge Spring. In Ridge Spring, turn left on Hwy. 392 at the Gazebo. Farm is 1/2 mile on Hwy. 392 on the right.

**From Saluda, SC** - take Hwy. 39 to Ridge Spring. Turn right on Hwy. 392 (at the gazebo) in Ridge Spring. Farm is 1/2 mile on Hwy. 392 on the right.

### TERMS AND CONDITIONS:

Cattle sell under the Terms and Conditions as adopted by the American Angus Association.

**All sale cattle that were potential carriers of AM (Arthrogryposis Multiplex) and/or NH (Neuropathic Hydrocephalus) have been tested and are determined to be AMF and/or NHF which means they have been tested free of these genes.**

### SALE INFORMATION:

1. For assistance in selection, contact any of the following:

**You don't have to be present at the sale to buy a bull. If you are unable to attend please contact the Yons prior to the sale and we will make arrangements for you to have an absentee bidder or bid by telephone or on the internet. We will guarantee your satisfaction.**

2. Terms of the sale are cash or check payable to: Yon Family Farms.

3. A certificate of registration will be transferred and mailed to the buyer of each lot.

4. We offer free delivery on bulls in SC, NC, and GA, **provided** the buyer is able to make arrangements to receive bull when delivery is made to your area, usually within a few weeks of the sale. Due to fuel costs and time restraints, we must consolidate trips. If you are unable to receive bulls when delivery is scheduled to your area, you will need to make arrangements to pick up your bull at the farm. Commercial delivery is free anywhere in the continental U.S. with a \$4,000 or more purchase and can be arranged by the Yons. **If you pick up your bull at the farm, deduct \$75 off the purchase price of each bull.**

5. Each bull will be at purchaser's own risk as soon as sold. Bulls will be fed and cared for free of charge for 2 weeks following the sale and will be housed at a rate of \$2 per day thereafter until you are ready to pick up your bull. Insurance will be available for cattle on sale day.

6. All cattle sell satisfaction guaranteed. For one year following the date of sale, if a buyer is not satisfied for any legitimate reason, you are entitled to a credit, refund or replacement, provided the animal has been properly cared for.

7. Yon Family Farms is a Brucellosis certified and TB accredited herd, and has been Johne's testing for 10 years (level JPL4). Bulls and heifers are ear notched and tested for PI-BVD. Health papers for shipment anywhere in the U.S. will be available.

8. Retained Interest - Yon Family Farms reserves the right to retain a one-third semen revenue interest on any bull sold in the sale. Those bulls which Yons wish to retain an interest in will be announced from the sale block on sale day. **The new owner will have full possession of the bull - this is only a semen interest if the bull is collected.**

9. Cooperator Herds - Cooperators have a heavy concentration of Yon genetics in their herds and manage their cattle under the same conditions and herd health programs that we do. Cooperator herds participating in this sale are: **JMK Farms** (John & Michelle Koon) Ward, SC; **Crapps Angus** (Phil Crapps) Kinards, SC; **Happy Trails Farm** (William & Linda Rushton) Saluda, SC; **Spanish Oaks** (Sharon Furr & Family) Blackstock, SC; and **Tobin Angus**, (Harry & Jeanette Tobin) Lodge, SC.

**Welcome!**

We hope you can make it to our 20th Annual Performance Tested Bull Sale here at the farm in Ridge Spring. It's hard to believe we have been selling bulls for 20 YEARS - during this time, we have become SO confident in Angus genetics and have seen the cattle work. In addition to the best set of Angus bulls we've ever produced, we are pleased to also offer SimAngus, Balancers, a Char/Angus and a registered Charolais bull in the February offering. The bulls look awesome, put together great "numbers," and are sound, thick and ready to go to work. The bulls are bred for, developed for and are the right kind for the commercial cattle industry. We continue to track performance of Yon-sired calves in the feedlot and on the rail and are confident that these bulls will get the job done. The bulls are the result of mating decisions made by evaluating EPD and performance data, while giving special attention to the traits that aren't measured by numbers - good udders, sound feet, quiet dispositions, eye appeal, and soundness.

At Yon Family Farms we take a team approach and appreciate the unique talents of each person who gives of their time and talents to make this farm function - Many thanks to Matt Dunn, Chay Renteral, Anthony Rauton, and Michelle Koon. Our children, Sally, Drake and Corbin, also do their fair share of the work and we appreciate their willingness, dedication, and the good job they do.

If we can assist you in any way, or show you the bulls prior to the sale, we would welcome the opportunity. If you would like us to help make a list of bulls that might best suit your operation, just give us a call and we'll do our best to match the right bull to your needs. Hope to see you on sale day - even if you don't need a bull this year; bring the family and enjoy some good fellowship as we celebrate 20 years of selling bulls.

Kevin and Lydia Yon

**Yon Family Farms Crew and Family –**  
Bottom Row, L to R - Drake, Sally & Corbin Yon; Anthony Rauton, Michelle Koon.  
Middle Row, L to R - Kevin & Lydia Yon, Barbara & Phillip Yon  
Top Row, L to R - Matt Dunn, Chay Renteral

**DVAuction** Broadcasting Real-Time Auctions

**Bid or Watch the Sale Online!**

We are pleased to offer the Yon Family Farms Bull Sale broadcast "live" over the Internet through DVAuction Services.

**First Time Users:**

- Visit the DVAuction website at [www.dvauction.com](http://www.dvauction.com)
- Click on the Register Tab.
- Complete Registration and Applying to Bid at Yon Family Farms. DV Auction will be contacting your bank to verify information.
- DVAuction will contact you to let you know that you have been approved to bid and buy at the sale "live" from your computer at home.

**After the Sale:**

- Contact Kevin or Lydia Yon to make arrangements for payment.
- Contact the Yons for delivery or pickup of your purchases.

Note: You must have high-speed internet access (DSL, T-1 or Broadband) to be able to bid during the sale.

Any questions: Contact Tami with DVAuction at (308) 870-3661 or [tmcintosh@dvauction.com](mailto:tmcintosh@dvauction.com).

We recommend that you register by February 18, 2010, for on-line bidding. Every attempt will be made to complete your application, even if it is on sale day.

**To Bid by Telephone on Sale Day:**

If you are unable to attend the sale, you can do your own bidding via a conference call telephone hook up. Buyers interested in this option should contact the Yons **prior to sale day**. On sale day, until sale time, you may call us at (803) 685-5048. During the sale, bidders should call 1-517-600-1616 (Passcode to enter the call is 4844572, followed by the

# sign; \*6 will mute/unmute your line during the conference call). The call leader will be Col. Darren Carter. The only cost to you will be your long distance telephone charges. Please call us at (803) 685-5048 prior to the sale if you plan to bid by telephone. Sight unseen purchases are guaranteed to meet your satisfaction.

# Performance Information

We have not included birth, weaning, and yearling weights on the embryo transfer bulls and they are so noted as "ET." Due to variations of breed influences of crossbred recipient dams, we feel the EPDs are the best information to use. We do not believe weights of ET calves should be compared with those raised by their actual dams; thus, to provide the most accurate comparisons, use the EPDs.

1. **Adjusted 205** - Weaning weights adjusted to 205 days of age and for age of dam. Our natural calves are not creep fed. Some of the ET calves were creep fed 30 days prior to weaning.
2. **Adjusted 365 and Adjusted Scrotal** - Weight and Scrotal Circumference (cm.) adjusted to 365 days of age.
3. **Yearling Frame Score** - Adjusted 365-day height converted to a frame score. Remember, this is based on one crude measurement taken in a chute. Don't discount a bull on frame score without taking a look at him.
4. **%IMF (Marbling)** - is the amount of desirable fat or marbling in the ribeye muscle adjusted to 365 days. Ultrasound predicts the percent fat which the USDA grader visually evaluates. Several research studies have shown that the genetic correlation between marbling and fat thickness is low, meaning producers can select for increased marbling and not have to be concerned about having animals put on additional external fat.
5. **RE-Adjusted Ribeye Area** - is measured in square inches and adjusted to 365 days of age. REA is positively and highly correlated with retail product. The heritability of this trait is moderately high meaning that the trait will be passed on to progeny. Ribeye Area is the most heritable of all carcass traits.
6. **Rib Fat and Rump Fat** - is measured in inches and adjusted to 365 days of age. Fat thickness is a good indicator of percent retail product. The higher the fat thickness (waste fat), the lower the percent retail product. Fat thickness is slightly lower in heritability than ribeye.
7. **Off-Test ADG** - Average Daily Gain (pounds per day) during the 112-day gain test.
8. **ADG Ratio** - Relative ranking of an animal's ADG during the 112-day test in relation to the average ADG of the entire test group which has an average of 100. All bulls were not raised under the same conditions from birth to weaning and were in various contemporary groups, thus their ADG's may be influenced. We believe that EPDs are the best information to use as selection criteria.
9. **W.D.A.** - Lifetime weight (pounds) per day of age. This is an important parameter to look at for those bulls with lower test ADG numbers. They may have come on test with a heavy starting weight and may have a very acceptable WDA, even if their ADG is lower than some.

## What are EPDs?

An Expected Progeny Difference (EPD) is a prediction of how future progeny of a sire or dam are expected to perform in various production and carcass traits which are measurable. EPDs are expressed in actual pounds, square inches, or centimeters, (depending on the trait), plus or minus that you can expect in the weights or measurements of progeny sired by a particular animal as compared with another animal. The EPDs of the animals listed in this sale book can be compared to other animals of the same breed.

The average EPDs for non-parent Angus bulls are:

CED +5, BW +2.1, WW +45, YW +82, MILK +21, SC +.40,  
Marb +.33, RE +.17, Fat +.013

Average EPDs Balancers:

CE 104, BW -.1, WW 35, YW 74, Milk 17, SC .30, MB .02, RE .08

Average EPDs Sim Hybrids:

BW -0.4, WW 26, YW 50.7, Milk 3.6, MB .31, Ribeye -.01

EPD Information is derived from the 2010 Spring National Sire Evaluations conducted by the Angus, Simmental and Gelbvieh Associations. Angus and Composite EPDs cannot be compared to each other. Please ask if you need assistance in understanding how to use the EPDs.

Each EPD has an accuracy value, (Acc.) which measures the reliability of the EPD. The higher the accuracy, the greater the reliability of the EPD and the less it would be expected to change.

**CED - Calving Ease Direct** - is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers. On first-calf heifers we would recommend a CED of +5 or higher.

**BEPD - Birth Weight EPD** - gives an indication of calving ease. Birth Weight EPD predicts the birth weight difference one can expect from any two sires. When bred to genetically similar groups of cows, a bull with a birth EPD of +5.0 should sire calves with an average birth weight 2 pounds heavier than a bull with a birth weight EPD of +3.0. Experience has shown that an Angus bull with a Birth Weight EPD of +2.5 or less can be used on first calf heifers with a minimum of calving problems.

**WEPD - Weaning Weight EPD** - is a prediction of a bull's ability to transmit weaning growth to his progeny. For example, Bull A has a weaning EPD of +40 pounds and Bull B has a weaning weight EPD of +20 pounds. At weaning, Bull A's calves will average 20 pounds heavier.

**YEPD - Yearling Weight EPD** - takes into account both pre-weaning and post-weaning growth. Yearling weight is the most heritable of all growth traits. You can expect bulls with high yearling EPDs to produce fast gaining calves. If Bull A has a Yearling EPD of +80 and Bull B has a Yearling Weight EPD of +50, Bull A's calves will average 30 pounds heavier than Bull B's at one year of age.

**Scrotal EPD** - expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

**Milk EPD** - Expressed in pounds of weaning weight that result from the amount of milk produced by daughters of a particular bull, as compared to the daughters of other bulls. If Bull A is +20 for Milk and Bull B is +10, Bull A's daughters' calves will weigh 10 pounds heavier at weaning due to her superior milking ability.

### CARCASS EPDS

**Marbling EPD** - Expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires. The higher the value, the higher the amount of intramuscular fat (taste fat) in the ribeye, which positively affects quality grade.

**RE EPD - Ribeye Area** - Predictor of the differences in square inches of ribeye area of a sire's progeny, compared to progeny of an average sire. Larger ribeye areas positively affect yield grade. This trait is highly heritable.

**Fat EPD** - Predicts the difference in external fat thickness measured between the 12th and 13th rib of a bull's progeny compared to progeny of all other bulls evaluated. Reported in inches.

# American Angus Association \$Values

The use of multi-trait indexes as tools for commercial cow-calf operators and seedstock breeders is rapidly evolving in the beef industry. Selection indexes are a tool which combines multiple traits into a single value, thus adding simplicity and convenience to select for several traits at once. An index approach takes into account genetic and economic values to select for economic merit. Weaned calf value (\$W), Feedlot Value (\$F), Grid Value (\$G) and Beef Value (\$B) are bio-economic values, expressed in dollars per head. \$Values only have meaning when used in comparing the relative merit or ranking of two individuals. As with EPDs, variation in \$Values between animals indicates expected differences in the relative value of progeny if random mating is assumed. Thus, a \$Value has meaning only when used in comparison to the \$Value of another animal.

## Weaned Calf Value (\$W)

\$W quantifies four primary economic impact areas: birth weight, weaning weight, maternal milk, and mature cow size.

\$Values only have meaning when used in comparing the relative merit or ranking of two individuals. \$W provides the expected dollar-per-head difference in future progeny pre-weaning performance in a multi-trait fashion, within a typical US beef cow herd. If Bull A has a \$W of \$25.00 and Bull B has a \$W of \$15.00, and these sires were randomly mated to a comparable set of females and the calves exposed to the same environment, and a normal number of replacement females were saved from both sires, on average you could expect Bull A's progeny to have a +\$10.00 per head advantage in pre-weaning value over Bull B's.

## Feedlot Value (\$F)

\$F is calculated using associations between weaning weight and yearling weight EPDs with feedlot gain value, feed consumption, and cost differences figured into the final calculation. \$F calculates the dollar-per-head average difference in a calf's performance for post weaning merit compared to progeny of other sires. For example, if Bull A has a \$F value of \$20.56 and Bull B's value is \$14.34, with random matings to comparable cows, Bull A's progeny would, on average, generate \$6.22/head more in the feedlot than Bull B's offspring.

## Grid Value (\$G)

The Grid Value (\$G) combines quality grade and yield grade attributes. A three-year rolling average is used to establish typical industry economic values for quality and yield grade schedules. Quality grade premiums are specified for Prime, CAB®, and Choice carcasses, as well as Select and Standard discounts. Yield grade premiums are incorporated for Yield Grade 1 & 2's (high yielding carcasses) with discounts for Yield Grade 4 & 5 (low red meat yields). Grid impact in \$/cwt and \$/head is calculated from the yield and quality components, and then combined to arrive at the Grid Value. (\$G)

## Beef Value (\$B)

Beef Value (\$B) represents the expected average dollars per head difference in the progeny post-weaning performance and carcass value compared to progeny of other sires. The \$B value is comprised of two pieces: Feedlot Value (\$F) and Grid Value (\$G). In real world terms, \$B is representative of weaning a set of calves, putting them in a feedlot, retaining ownership and sending the cattle through a value based grid.

These values were created from three major components - EPDs, industry-based economic values, and the equations that tie together the genetics and economics. Although feedlot and carcass merit are important components of the beef production chain, it should be stressed that these \$Values are not to be used as a single selection criterion, since it only combines post-weaning and carcass performance.

## Current Average \$Values for Non-Parent Angus Bulls are:

**\$W +24.87, \$F +23.88, \$G +21.98, \$B +41.10**

# How Bulls Have Been Handled

1. At birth, bulls were vaccinated for Clostridial disease and IBR, PI3. Bulls were vaccinated at 3-4 months of age for BVD, BRSV, IBR, PI3, Leptospirosis, H. Somnus, and Clostridial disease. At weaning, bulls were boosted for the same, plus received a Pastuerella vaccine and were dewormed. They were dewormed going on test and at the 56-day weight.
2. Natural bulls were not creep fed at any point. Some Embryo Transfer (ET) Calves were creep fed for 30 days prior to weaning. After a short adjustment period following weaning, they all began test. ET bulls are so noted in the sale book and were raised on recipient dams.
3. Bulls began the 112-day test on August 12, 2009. They were limit fed a ration consisting largely of corn silage and by-products (dried distillers grain, hominy, and corn gluten pellets). They also had free choice coastal bermuda hay. Our target average daily gain for the test was three pounds per day. They have had plenty of exercise and are not fat.
4. Bulls were scanned for ultrasound measurements by Andy Meadows, DVM, a B.I.F. and AAA CUP certified technician from Springwood Livestock Management Systems in Buchanan, VA.
5. All bulls were given a complete breeding soundness exam by Dr. Jeff Nordin and Dr. Joel Riley from Saluda, S.C. in January 2010. Bulls were given booster vaccinations, including modified-live IBR, PI3, BVD, and BRSV; Vibrio and 5-way Lepto; 7-way Clostridials, and H. Somnus. They were dewormed with Pour-On Eprinex.

*Dr. Jeff Nordin and Dr. Joel Riley doing breeding soundness exams.*

---

## Ultrasound Data

We have been using ultrasound technology since 1995 and are providing you with adjusted yearling ultrasound measurements as well as carcass EPDs. The ultrasound data represents some of the most unbiased data in all of the Angus database. All scans are sent directly to an authorized lab where images taken by certified technicians are evaluated and interpreted by trained personnel. The full animal model is used in the genetic evaluation of ultrasound data which means both the sire and dam are accounted for, unlike with carcass progeny testing where most steers evaluated are produced from dams of unknown genetic merit. To most accurately evaluate our yearling bulls from a carcass standpoint, use the Carcass EPDs and adjusted yearling measurements. Ratios for adjusted measurements are not printed in the sale book as the bulls do come from several different weaning contemporary groups and are ratioed within that group, rather than within the whole test group. Please ask if you have any questions about the use of ultrasound data or EPDs.

*Andy Meadows, DVM, from Springwood Livestock Management, in Buchanan, VA, does our carcass ultrasound work. We have been scanning all of our yearling bulls and heifers since 1995.*
